

Occupational Projections Report by Program for a 5-year Period (2015-2020)

August 2015

Office of Institutional Research and Effectiveness

Executive Summary

Data Description

This report displays occupational projections (job outlook for completers) for every career - oriented degree and certificate currently offered by the College (with the possible exceptions of new certificates and degrees — contact the IRE office if you note a missing degree/certificate). The entries are sorted by “degree type” with AS degrees first, followed by ATC, ATD, BAS, BS, CCC, CPP, EPI and PSAV. Thus, if a program offers multiple degrees/ certificates, the information for each degree/certificate will be presented on separate lines.

The data were generated by Economic Modelling Software, Inc (EMSI) using Standard Occupational Classification (SOC) codes provided by program personnel. SOC codes indicate the occupations for which the program/certificate is designed to train future employees. The specific SOC codes used for each degree/certificate are available from the IRE office on request. The region used for this data was the MSA or Metropolitan Statistical Area data, which includes, Miami, Fort Lauderdale and West Palm Beach counties.

For each entry, the table displays the number of job openings over a 5-year period, the average annual openings, then number of current jobs and the number of jobs projected five years later. The sixth column (Average Annual Regional Openings) is probably the most useful for purposes of program review, it is the average number of jobs (both new and replacement) for the five years, thus showing, an average of how many jobs will be available to new completers in the program. Please note that if projection is negative, it is shown in red. The Average Annual Job Growth rate can also be informative, but is highly affected by the overall size of the labor force associated with that program.

For example, an increase of 100 jobs will yield a large growth rate in a field with around 1,000 total jobs, but a small growth rate in a field with 20,000 total jobs. Finally, Median Hourly Earnings are an estimate derived from national, state and local databases.

Use of Data for Program Review

In the Program Review Summary Form completed for each program as part of the Program Review Process, report the Average Annual Regional Openings for all of the degrees and certificates embedded in the program. Note that it is not accurate to sum the Average Annual Regional Openings across degrees and certificates. For example, if a certificate has been assigned the same SOC codes as the degree, the data in each row will be identical, resulting in double-counting of the actual openings.

If you have any questions about the data and how they are used in the Program Review Process, please contact the Executive Director of the IRE office.
