NUR 2261L

Course Description

Provides the opportunity for the student to be able to make situated clinical judgments and provide safe nursing care to diverse populations. The three types of apprenticeships (knowledge, practice and ethical comportment) support the knowledge and skills that students need as they progress in their learning.

Course Outcomes

1. Exhibit accountability for nursing judgment and actions.
2. Implement caring, compassion, and respect for all persons and for human dignity.
3. Implement evidence-based practices that are consistent with safe, quality care in the promotion of a healthy work environment.
4. Integrate knowledge into practice in order to promote quality and improve nursing practice.
6. Initiate evidence-based practices when planning patient centered-care.
7. Identify multiple alternatives to improve the quality of care.
8. Manage technical skills safely and accurately.
10. Document accurately in simulated EHR.
11. Respect diversity and others’ values.
12. Weigh ethical challenges.
13. Conduct population-based transcultural health assessments.
14. Take responsibility for legal and regulatory guidelines, including HIPAA.
15. Dissect and communicate information effectively.
16. Executes principles of collaboration including teamwork.
17. Predict the needs of patients and families which to promote and restore health, integrity and self-determination.
