

#	Question	Answer
1	There are 32 Wireless Mics being requested in the SLX Series. There are other items that need to be added in order to make this work and the spread sheet is protected. Is there really a need for 32 Wireless mics? You are also selecting a non-digital mic which can be accessible to interference.	The desktop mics are to be used with the receivers from the handheld and lav mic kits. There will be a total of 32 mics, but only 16 receivers. This is only to provide flexibility in mic setup. Overall, there will be 8 wireless channels with an option between handheld & desktop mics and another 8 wireless channels with an option between lav & desktop mics. (ex. One setup may have 12 desktop mics, 2 lav mics, and 2 handheld mics)
2	I mentioned in the walk through that the current design will not work for a divisible space so we were told to provide our own design. Can we submit our own proposal and not the provided excel sheet?	Yes, only if the current design will not work for a divisible space and you provide justification for any deviation from provided specifications. The bidder must submit with their proposal, itemized and in detail the products proposed, part number, pricing with literature and a new Schematic diagram.
3	We will also need to add an AV rack along with the needed accessories in the control room as one is currently not on the equipment list. Is this ok?	Yes, one (1) Middle Atlantic SR-40-28 or similar for the control room equipment rack.
